"Cloning and expression of cDNA encoding Xenopus laevis bone
morphogenetic protein-1 during early embryonic development.";
Gene 134:257-261(1993)
-!- FUNCTION: INVOLVED IN PATTERN FORMATION IN GASTRULA AND LATER
DIFFERENTIATION OF DEVELOPING ORGANS.
-!- DEVELOPMENTAL STAGE: BLASTULA, EARLY GASTRULA AND HATCHED
TADPOLES; LITTLE OR NO EXPRESSION IN WORULA AND LATE GASTRULA.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M12A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-FEB-1996 (Rel. 33, Created)

Which is related to the Drosophila dorsoventral gene tolloid and encodes a putative astacin metalloendopeptidase.";
Dev. Biol. 163:175-183(1994).
-1- FUNCTION: CLEAVES THE C-TERMINAL PROPEPTIDES OF PROCOLLAGEN I, II AND II. INDUCES CAPRILAGE AND BONE FORMATION.
-1- CATALYTIC ACTIVITY: Cleavage of the C-terminal propeptide at Ala-|-Asp in type and II procollagens and at Arg-|-Asp in type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          -1. COFACTOR: Binds 1 zinc ion per subunit (By similarity).
-1. ENZYME REGULATION: ACTIVITY IS INCREASED BY THE PROCOLLAGEN C-ENDOPERTIDASE ENHANCER PROTEIN.
-1. TISSUE SPECIFICITY: AT HIGH LEVELS IN EMBRYONIC MATERNAL DECIDIUM AND FLOOR PLATE REGION OF THE NEURAL TUBE. LESS IN DEVELOPING MEMBRANOUS AND THE MESENCHYME OF SPIEEN AND LUNG.
-1. SIMILARITY: BELONGS TO PEPTIDASE FAMILY MIZA.
-1. SIMILARITY: CONTAINS 5 CUB domains.

CERTAIN RECEPTOR INVOLVED IN THE DEVELOPMENT OF THE CARDIOVASCULAR SYSTEM, IN ANGIOGENESIS, IN THE FORMATION OF CERTAIN NEURONAL CIRCUITS AND IN ORGANOGENESIS OUTSIDE THE NERVOUS SYSTEM.

SYSTEM. IT MEDIATES THE CHEMOREPULSANT ACTIVITY OF SERAPHORINS. IT BINDS TO SEMAPHORIN 34, THE PLGF-2 ISOPORM OF PGF, THE VEGF-165

INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.

INCREASED VEGF-165 BINDING TO KDR AS WELL AS INCREASED CHEMOTAXIS.

-!- FUNCTION: Growth factor active in angiogenesis, lymphangiogenesis and endothelial cell growth, stimulating their proliferation and migration and also has effects on the permeability of blood vessels. May function in the formation of the venous and lymphatic vascular systems during embryogenesis, and also in the maintenance of differentiated lymphatic endothelium in adults. Binds and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       035251;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         89
activates VEGFR-3 (Flt4) receptor (By similarity).

-!-SUBCNIT: Homodimer; non-covalent and antiparallel (By similarity).
-!-SUBCELLULAR LOCATION: Secreted (By similarity).
-!-PTM: Undergoes a complex proteolytic maturation which generates a variety of processed secreted forms with increased activity toward VEGFR-3 and VEGFR-2. VEGF-D first form an antiparallel homodimer linked by disulfide bonds before secretion. The fully processed VEGF-D is composed mostly of two VEGF homology domains (VHDs) bound by non-covalent interactions (By similarity).
-!-SIMILARITY: BELONGS TO THE PDGF/VEGF FAMILY OF GROWTH FACTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21 GFSIEHRAVKDVSLERSSRSVLERS-----EQQIRAASTLEELLQVAHSEDWK----

"Neuropilin-2 and neuropilin-1 are receptors for the 165-amino acid
form of vascular endothelial growth factor (VEGF) and of placenta

growth factor-2, but only neuropilin-2 functions as a receptor for
the 145-amino acid form of VEGF."

J. Biol. Chem. 275:18040-18045(2000)

C. !- FUNCTION: The membrane-bound isoform 1 is a receptor involved in
the development of the cardiovascular system, in anglogenesis, in
the development of fer in the cardiovascular system, in anglogenesis, in
the development of semaphorins. It binds to semaphorin 3A, The PLGF-2
isoform of semaphorins. It binds to semaphorin 3A, The PLGF-2
isoform of PGF, The VEGF-165 isoform of VEGF and VEGF-16.
Coexpression with KDR results in increased VEGF-165 binding to KDR
as well as increased chemotaxis. It may regulate VEGF-induced

-i- FUNCTION: BINDS TO THE COCH-TERMINAL PROPERTIDE OF TYPE I
PROCOLLAGEN AND ENHANCES PROCOLLAGEN C-PROTEINASE ACTIVITY.
-i- FUNCTION: C-TERMINAL PROCESSED PART OF PCPE (CT-PCPE) MAY HAVE AN METALLOPROTEINASE INHIBITORY ACTIVITY.
-i- SUBCELLULAR LOCATION: Secreted.
-i- FINI. C-TERMINALLY PROCESSED AT MULTIPLE POSITIONS.
-i- SIMILARITY: Contains 1 UTR domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  50; Indels 22; Gaps
